

TRADEPAQ.enable™

Web-enabling and Screen Rejuvenation for Enterprise Systems

Overview

TRADEPAQ.enable, provides enterprises running any green screen application with the ability to protect and enhance their investment in their existing ERP system by integrating e-commerce strategies into their business practices.

Enable allows you to quickly exploit the benefits of ebusiness without a major investment in new systems. Our product permits you to web-enable existing enterprise applications that run on host systems with no additional programming. Our solution supports collaboration with your customers, suppliers, and users in a secure ebusiness environment.

TRADEPAQ.enable automatically transforms enterprise host applications into JAVA and HTML user interfaces. It allows you to personalize these applications with menu bars, macro buttons, customizable fonts and colors, online help, and screen text translation that support the unique requirements of each of your ebusiness trading partners.

Productivity increases with your ability to bypass screens, automate workflows, and navigate via point and click directly to the information you need. You can also export critical host data to other applications, such as Microsoft Excel, Microsoft Word, and email.

TRADEPAQ.enable increases the return on investment in your current enterprise system by leveraging the host system infrastructure. There is minimal implementation risk and no additional programming required.

Achieve cost savings with simpler user training and mitigate error rates, thereby increasing employee productivity. Lower maintenance, hardware and software requirements and overall operational outlays.

With improved flow of information and access to critical data, you will achieve better customer service.

The bottom line: you can leverage exist-

ing applications, eliminating the need to rewrite or restructure existing programs.

With TRADEPAQ.enable, you will be able to modernize existing applications with easy to use and maintainable ebusiness infrastructure for your business requirements, at minimal cost.

TRADEPAQ.enable comes with a complete online help system, including field by field descriptions and step by step instructions. And when you need it, TRADEPAQ offers complete 24 hour help desk support with implementation and support services located worldwide, including Bangkok, Bogota, Amsterdam, London, Helsinki, and New York.

Benefits

- Generates significant ROI by leveraging existing systems
- Supports rapid implementation
- Offers low risk with no programming required
- Increases output and reduces overall costs through decreased error rates, improved employee productivity, enhanced customer service, better information access, reduced operational costs, minimized training, and lower maintenance requirements
- Increases customer satisfaction
- User productivity is enhanced significantly because of the minimal training required.

Functions and Features

- Extends your existing enterprise applications to include order status inquiries, sales/CRM, inventory management, customer support, server consolidation, and multi-lingual applications.
- The application will look the same at the office and on the road. An easy to use, consistent interface will be presented from wherever users access the system .
- Screens can be bypassed and users can navigate through the application to get directly to the data they need to access.
- Point and Click capability: every host application screen being accessed will be automatically presented as a browser screen, with defined input fields, clickable function keys and menu buttons, and light-pen and reverse image support.

- Automate log-on, skip screens that contain sensitive information, and eliminate the need for the user to input redundant information.
- Save values from one screen for input or display on subsequent screens.
- Combine screens to streamline workflow and make users more efficient.
- Link application screens to intranet and the Internet, to give users direct access to the information they require.
- Extend the boundaries of host applications, delivering data for further reformatting, integration with other sources, and returning or displaying the results.

Technology Highlights

- Runs in any browser such as Internet Explorer or Netscape
- Includes TN3270, TN5250, VT100 and VT220 host connectivity
- No client-side installation
- Secure Socket Layer (SSL): TRADEPAQ.enable works with today's industry standard security protocol, Secure Socket Layer (SSL), to encrypt the data being sent over the Internet.
- Host/Employee Access: employees can access host applications from their homes, sales people can file reports from the road, and related parties, such as suppliers and vendors, can access your host to check inventory levels and other critical information.
- Customer Access: with an online system, customers gain self sufficiency, ensuring overall accuracy by reducing the need for telephone support or multiple party contact.

- No Customization: host screens are presented graphically and perform all of the functions that would otherwise be programmed into the mainframe or AS/400.

TRADEPAQ has been an SSA GT partner for over seven years. By helping clients expedite deliveries, eliminate errors and reduce response times, we help our clients improve interactions with their business partners, whether customers, vendors or employees.

TRADEPAQ solutions are used by Global 2000 Enterprises, Logistics Service Providers, Banks, B2B Exchanges, and Health Care Organizations.
